9. (Twice Amended)   The method of claim [7] 1, wherein the step of identifying corrected text comprises using confused pronunciation matching, in which commonly-confused sounds are treated as a single sound, to identify text corresponding to the pronunciation.

17. (Amended)   A method for recognizing a spelling of a word in computer-implemented speech recognition, comprising:

   performing speech recognition on an utterance to produce recognition results;

   identifying a spelling command in the recognition results, wherein the spelling command indicates that a portion of the utterance comprises a spelling;

   producing the spelling by searching a dictionary using the recognition results,

   wherein producing the spelling comprises using confused spelling matching, in which commonly-confused letters are treated as a single letter, to identify the spelling corresponding to the portion of the utterance.

Cancel claim 26 without prejudice or disclaimer.

18. (Amended)   The method of claim [26] 17, wherein the dictionary is a confused spelling dictionary and the confused
